

## COFFEE PERCOLATOR

Please be sure the stem holding the coffee basket is properly seated over the well at the bottom of the percolator. We find that a ratio of one pound of regular grind coffee to sixty cups of water will give you a good cup of average strength coffee. Start with cold water from the tap. Coffee is ready when red light is lit and will stay at serving temperatures as long as the percolator is plugged in and red light is on. It takes approximately one minute per cup for coffee to brew.

Thank you for using our services.
